

Ask Cinderhaven — Which SKUs should die?

baseline scenario — figures reconcile to SKU Rationalization Framework

Which SKUs should die?

No SKUs qualify for the kill list today. All 50 active SKUs are above the velocity floor (5.0 units/week/store) or the margin floor (15%). 15 SKUs are on watch — one poor quarter away from the list.

no kills

Key numbers

0	Kill candidates both criteria failed
15	On watch one criterion failed
5.0 units/wk/store	Velocity floor

How this verdict was reached

Kill = avg_weekly_velocity < 5.0 units/week/store AND margin_pct < 15%. Both conditions required — slow + profitable = watch list, not kill list. Thresholds from SKU Rationalization Framework.
