

Ask Cinderhaven — What did the orders I couldn't fill actually cost me?

baseline scenario — figures reconcile to The 150 Cases You Didn't Ship

What did the orders I couldn't fill actually cost me?

\$4,768,273 in implied revenue was left on the shelf — active SKU-store authorizations with zero scan velocity across 142,144 store-weeks. Worst offender: Wildflower Honey at \$450,297 implied lost (5,169 zero-velocity weeks). Every zero-scan week at an authorized store is a stockout you paid to be in.

\$4,768,273 implied stockout cost

Key numbers

\$4,768,273	Implied stockout cost authorized stores, zero velocity
142,144	Zero-velocity store-weeks active SKU × store × week with no scan
Wildflower Honey	Worst SKU \$450,297 implied

How this verdict was reached

Stockout = active fct_distribution record (is_active=true) with zero units_sold in fct_scan_data for that store-week. Implied cost = zero_weeks × avg_weekly_units_when_selling × wholesale_price. Fires when total implied cost > \$250,000. Routes to The 150 Cases You Didn't Ship.
