

Ask Cinderhaven — Which SKUs are slowing down before the buyer notices?

baseline scenario — figures reconcile to Velocity Decision Tool

Which SKUs are slowing down before the buyer notices?

12 of 50 SKUs are in active velocity decline (13-week vs prior 13-week $< -5\%$). Worst: Carolina Gold BBQ — 761 units/week now vs 1,407 prior (-45.9%). A buyer running scan review in the next 30 days will see this decline first.

12 SKU(s) in decay

Key numbers

12	SKUs in decay $< -5\%$ velocity change
6	SKUs in caution $< 5\%$ growth
+23.2%	Portfolio avg change 13 wk vs prior 13 wk

How this verdict was reached

Velocity change = (trailing 13-week avg — prior 13-week avg) / prior 13-week avg. Computed from fct_scan_data, summed across all stores per SKU. Decay threshold: $< -5\%$. Caution threshold: $< 5\%$ growth. Thresholds from Velocity Decision Tool.
