

Ask Cinderhaven — Which SKUs are slowing down before the buyer notices?

baseline scenario — figures reconcile to Velocity Decision Tool

Which SKUs are slowing down before the buyer notices?

All 50 SKUs are accelerating: portfolio average +36.2% (13-week vs prior 13-week). Slowest momentum: Everything Bagel Spread at +24.7% — still growing but the weakest in the portfolio. No decay to act on today.

all SKUs accelerating

Key numbers

0	SKUs in decay < -5% velocity change
0	SKUs in caution < 5% growth
+36.2%	Portfolio avg change 13 wk vs prior 13 wk

How this verdict was reached

Velocity change = (trailing 13-week avg — prior 13-week avg) / prior 13-week avg. Computed from fct_scan_data, summed across all stores per SKU. Decay threshold: < -5%. Caution threshold: < 5% growth. Thresholds from Velocity Decision Tool.
